

GO: HSPC_vs_Normal_1_5x_downDEGs

□ GeneRatio □

muscle system process
muscle contraction
muscle cell differentiation
cell-substrate adhesion
muscle tissue development
striated muscle tissue development
wound healing
regulation of monoatomic ion transport
chemotaxis
taxis
collagen-containing extracellular matrix
contractile muscle fiber
myofibril
sarcomere
cell-substrate junction
focal adhesion
endoplasmic reticulum lumen
apical plasma membrane
apical part of cell
cell leading edge
actin binding
glycosaminoglycan binding
sulfur compound binding
enzyme inhibitor activity
guanyl nucleotide binding
guanyl ribonucleotide binding
DNA-binding transcription factor binding
phospholipid binding
monoatomic ion channel activity
DNA-binding transcription activator activity, RNA polymerase II-specific

p-value
